ProPay FLASH

New ergonomic design - same great functionality and swipe rates as low as 1.99%!

The ProPay FLASH Card Reader is a simple, secure and affordable way for you to accept credit and debit cards. It is the ultimate in portable convenience and security. The ProPay FLASH allows mobile professionals to collect card payment information while away from the computer or to process payments in real-time, if connected to an Internet-enabled computer and get instant authorization. It encrypts the sensitive payment data from the moment of swipe. That means that card data is never stored in clear text, and your data is protected.

If you are away from your computer, you can still swipe cards and capture payment data securely. The ProPay FLASH will store the payment information for up to 71 transactions so that you can process payments when you get back to your computer. Once processed, the transactions are deleted from the device, but you can store the customer's card data with ProtectPay Online for future billing, if desired. Greater security means more customer confidence as they do business with you.

System Requirements

- Windows XP
- Internet Explorer 6.0 or higher
- .NET Framework 2.0
- ProPay Merchant Account

THE PROPAY FLASH CARD READER IS:

Fast and Easy to Use

- New ergonomic design simplifies card swiping.
